## SUMMARY

Backend Software Engineer with 1.5+ years of experience building scalable backend services and REST APIs. Hands-on experience with AWS, Docker, Kubernetes, and CI/CD pipelines, with exposure to production support and observability practices. Strong understanding of microservice architecture, distributed systems fundamentals, and writing reliable, testable code in agile environments.

## EXPERIENCE

### Software Engineer

Jan 2024 – Present

*Dassault Systèmes Global Services, Pune, India*

#### GenAI Chatbot – Backend Service

- Developed and delivered a production-ready backend service supporting **150+ concurrent internal users**.
- Architected scalable REST APIs and modular service components following microservice principles.
- Defined API contracts and structured backend workflows for document ingestion, embedding, and query execution.
- Optimized request routing and vector retrieval logic, reducing manual lookup effort by **40%**.
- Containerized services using **Docker** and deployed them on **Kubernetes** to enable scalable production rollouts.
- Contributed to sprint planning, technical discussions, code reviews, testing, deployment, and production support.
- Implemented unit tests to ensure correctness and reliability of core business logic.

#### SQL & Data Layer Optimization

- Engineered and optimized **10+ PostgreSQL SQL views** supporting business-critical workflows.
- Improved query execution time by up to **80%** through indexing strategies and performance tuning.
- Strengthened data access layers to enhance scalability, maintainability, and data correctness.

## PROJECTS

### API Gateway (Golang)

- Built a custom API Gateway in **Golang** implementing reverse proxy architecture and middleware pipelines.
- Implemented **6+ middleware components** including authentication, rate limiting (100 req/min per client), request validation, logging, load balancing, and circuit breaking.
- Achieved 80%+ unit test coverage for routing and middleware logic.

### URL Shortener Service (Go)

- Developed a scalable RESTful backend service using **Gin Framework** for URL shortening and redirection.
- Achieved less than 10ms average redirect latency and supported 800+ requests/sec under concurrent load testing.
- Implemented persistent storage using SQLite and structured API endpoints following REST principles.

## CORE COMPETENCIES

**Languages:** Golang, Python, JavaScript

**Backend:** REST APIs, Microservice Architecture, API Design, Middleware

**Databases:** PostgreSQL, MongoDB, SQLite

**Cloud & DevOps:** AWS (EC2, S3, VPC, IAM), Docker, Kubernetes

**CI/CD:** GitHub Actions, Jenkins

**Observability:** Logging, Monitoring, Kubernetes Metrics

**Concepts:** Distributed Systems, Scalability, Reliability, Agile Development

## EDUCATION

### Bachelor of Technology (Computer Engineering)

2019 – 2023

Vishwakarma Institute of Information Technology, Pune
